Culture, Architecture, and Design-Amos Rapoport 2005 The three basic questions of EBS are (1) What bio-social, psychological, and cultural characteristics of human beings influence which characteristics of the built environment?; (2) What effects do which aspects of which environments have on which groups of people, under what circumstances, and why, where, and when?; and (3) Given this two-way interaction between people and environments, what must be mechanisms that link them. What are these mechanisms? Focusing on answers to these and other questions, “Culture, Architecture, and Design” discusses the relationship between culture, the built environment, and design by showing that the purpose of design is to create environments that suit users and, therefore, user-oriented. Design must be also based on knowledge of how people and environments interact. Thus, design needs to respond to culture. In discussing (1) the nature and role of Environment-Behavior Studies (EBS); (2) the types of environments; (3) the importance of culture; (4) preference, choice, and design; (5) the nature of culture; (6) the scale of culture; and (7) how to make culture usable, Amos Rapoport states that there needs to be a “change from designing for one’s own culture to understanding and designing for others: cultures and basing design on research in EBS, anthropology, and other relevant fields. Such changes should transform architecture and design so that it, in fact, does what it claims to do and is supposed to do? create better (i.e., more supportive) environments.

The Meaning of the Built Environment-Amos Rapoport 1990 The Meaning of the Built Environment includes the most contemporary everyday buildings for their users. Professor Rapoport uses examples and vignettes, drawn from many cultures and historical eras as well as contemporary America, to explicate a new framework for understanding how the built environment comes to have meaning, both for individual and whole societies.

The Mutual Interaction of People and Their Built Environment-Amos Rapoport 1976-01-01 Culture-Meaning-Architecture-Keith Diaz Moore 2019-07-17 This title was first published in 2000: This collection of essays provides an excellent integrated source for the latest thinking in multiple disciplines on the issue of culture and its relationship with built form and hence, human environmental experience. Whether one is primarily interested in how culture-influenced environment inquiry affects: theoretical issues, research approaches, research findings, practical applications, or has implications for teaching, this book provides an engaging dialogue in regard to each of these perspectives. As important, the book’s introduction provides a conceptual framework for integrating the various contributions in a meaningful and systematic fashion. Contributors come from disciplines including anthropology, architecture, human ecology, psychology and urban planning. Buildings and Society-Anthony D. King 2003-10-04 First Published in 1984. Routledge is an imprint of Taylor & Francis, an informa company. Environment and Culture-Irwinn Altman 1980-04-30 Following upon the first two volumes in this series, which dealt with a broad spectrum of topics in the environment and behavior field, ranging from theoretical to applied, and including disciplinary, interdisciplinary, and professionally oriented approaches, we have chosen to devote sub sequent volumes to more specifically defined topics. Thus, Volume Three dealt with Children and the Environment, seen from the combined perspective of researchers in environmental and developmental psychology. The present volume has a similarly topical coverage, dealing with the complex set of relationships between culture and the physical environment. It is broad and necessarily eclectic with respect to content, theory, methodology, and epistemological stance, and the contributors to it represent a wide variety of fields and disciplines, including psycho logical, geography, anthropology, economics, and environmental design. We were fortunate to enlist the collaboration of Amos Rapoport in the organization and editing of this volume, as he brings to this task a particularly pertinent perspective that combines anthropology and ar chitectural. Volume Five of the series, presently in preparation, will cover the subject of behavioral science aspects of transportation.
that game spaces can evoke narratives because the player is interpreting on concepts from literary studies, architecture, and cinema, Nitsche argues these spaces through a combination of perception and interaction. Drawing through fictional worlds that come to life in our imagination. We encounter analysis. Navigable 3D spaces allow us to crawl, jump, fly, or even teleport through environments that are not only visually rich but also immersive and interactive. This exploration of space highlights the importance of creating engaging and dynamic environments that can evoke narratives and emotions in the players.

Nitsche investigates what strategic advances in graphic representation a dramatic artistic and technical development in the field of video game design and architecture. The move to 3D graphics represents a shift in the way environments are constructed, offering more freedom and flexibility in the design process. This evolution has allowed for the creation of more immersive and realistic worlds, which in turn can enhance the narrative qualities of video games. Through the analysis of these advancements, Nitsche explores how the experience of space has become a key element of how we perceive and interact with digital environments.

Nitsche concludes by discussing the implications of these changes for video game design and architecture. He revisits current topics in game research, including narrative, rules, and play, and, from this new perspective, Video Game Spaces provides a range of necessary arguments and tools for media scholars, designers, and game researchers with an interest in 3D game worlds and the new challenges they pose. People and Buildings-Robert Gutzman 2017-07-12 There is at the present time a continuing interest in relating the behavioral sciences to design disciplines. Sociologists and social psychologists have been added to faculties of architecture schools, where they offer seminars and participate as programming specialists and design critics in studio courses. Behavioral scientists in many European countries have collaborated with architects and planners in design work undertaken by governmental ministries, and more recently have been participating in the work of private design firms. Simulatons research. The volumes thus provide an overview of work on current topical problems. Yet, as the field is developing, specialization is inevitably becoming more pronounced in general. don't miss the transparent "Don't Miss a Sec" sidewalk toilet -- are the following: Central Library Rotterdam, The Netherlands SIDE Hotel, Hamburg, Germany Rain Restaurant, Toronto, Canada Rizhao Public Bathroom, Rizhao, China Mid-City Gym, New York City Public Toilets at the Port of Dubrovnik, Croatia Yoga Deva, Gilbert, Arizona Kros Urinal, London, UK Restrooms of the New Hotel, Athens, Greece. More than 600 full-color photographs illustrate the designs in detail and each project is accompanied by descriptive text in five languages. Plans and detailed descriptions show the transformation of the public toilet during its planning, development and construction stages. Designers, architects, students and the purely inquisitive will find Public Toilet Design fascinating and informative.

Directory of Cultural Resource Education Programs at Colleges, Universities, Craft and Trade Schools in the United States- 1994 This directory provides information about training programs or education programs that last from six months to several years and promote cultural heritage of U.S. education. There are three sections in this directory. Section 1, "Discipline Definitions and Education Programs or Directories," defines the groups of related terms, identifies the schools or colleges that offer them, and refers the reader to additional directories or resources. Section 2, "State by State Program Descriptions," describes the schools or colleges in more detail and includes a mailing address and the types of programs offered. Section 3, "Additional Education Directories," provides greater detail on the additional directories and resources. This directory is intended for high school and undergraduate level students (and their counselors and advisors) seeking advanced training related to the preservation and management of cultural resources and cultural heritage.

Human Aspects of Urban Form-Amos Rapoport 2016-06-03 Human Aspects of Urban Form: Towards a Man-Environment Approach to Urban Form and Design discusses the man-environment interaction in urban setting. The book is comprised six chapters that provide a broad conceptual framework using a range of disciplines. The text first tackles urban design as the organization of space, time, meaning, and communication. The second chapter talks about environmental quality, while the third chapter deals with environmental cognition. Next, the book tackles the importance and nature of environmental perception. Chapter 5 discusses the city in terms of social, cultural, and territorial variables. Chapter 6 details the distinction between associational and perceptual worlds. The book will be of great interest to urban planners and government policymakers. Researchers and practitioners of sociological and behavioral science will also benefit from the book.

Medieval Conduct-Kathleen M. Ashley 2001 Focusing on a broad range of texts from England, France, Germany, and Italy -- conduct and courtesy books, advice poems, devotional literature, trial records -- the contributors to Medieval Conduct draw attention to the diverse ways in which readers of this literature could interpret such behavioral guides, appropriating them to their own ends. Medieval Conduct expands the concept of conduct to include historicized practices, and theorizes the connection between texts and their concrete social uses; what emerges is a nuanced interpretation of the role of gender and class inscribed in such texts. By bringing to light these subtleties and complexities, the authors also reveal the ways in which the assumptions of literary history have shaped our reception of such texts in the past two centuries.

Ideas and Beliefs in Architecture and Industrial Design-Ivar Holm 2006 Culture and Identity-Wilfred April 2018-05-02 This book is a wonderful celebration of culture and identity, especially from the cultural lens of the various authors' nation of origin. Culture is viewed as a collective programming of the mind and is at times compared to an onion; the more you peel off the layers, the more you get to learn about the values, beliefs, and norms of the respective societies. As complex as the onion diagram is, and it gives the possibilities of tears due to its complexity, a great understanding is critical to interact and communicate effectively. It is a unique tribute to the many scholars who have embarked on this journey of exploring culture and how identity is defined. It is an intellectual discourse that could act as a springboard for many more experiments to be conducted around the world, more specifically the multidimensional aspects of culture and identity. Other interesting elements in this book are the many historical details and the abundance of insightful illustrations.
